## Grid-Top Single Level Displays

Growers from Australia to Maine have discovered the plant-friendly nature of plastic benching systems. There are no metal parts to rust, no wooden parts to rot, and no place for insects or fungus to find a home. Molded with the strongest commercially available UV resistance, these benches will serve your needs for years to come.

Height: 18"

## Solid-Top Single Level Displays

The solid-top versions of our original bench systems meet a more diverse merchandising need. Use them instead of grid-top for cross merchandising to maintain a consistent look and feel in your garden center. They also make ideal utility tables in growing environments and have a more finished look for use in an indoor setting.
